

Sustainable, data-driven

Community Paramedicine is not just a model anymore.

Beyond Lucid Technologies has deployed patient-centric longitudinal charting, tracking, scheduling, and analytics software nationwide to help avoid hospital readmissions.

Council approved. Coming soon

Community Paramedics form the post-discharge bridge across the connected care continuum. But to date they lacked tools capable of linking all the stakeholders in a patient's care over time...in real-time from the bedside.

As of November 10, 2015:

MEDIVIEW™ is the **first and only** NEMESIS v3 and v2 Gold software that charts **patient-specific records** over time and shares them – in as little as 30 seconds – with care facilities, including PCPs & SNFs, as a Continuity of Care Document (CCD) that all major EHRs can use to extract data digitally, in real-time.

*As of November 10, 2015
